<i>Phone number</i>	

### Project details

<i>Title</i>	Privacy-Preserving Machine Learning in Clinical Brain MRI
<p><i>Detailed description:</i> Context and Motivation: Medical imaging data is highly sensitive. Ensuring compliance with regulations (e.g., GDPR) and preventing patient re-identification is crucial when developing and deploying AI systems.</p> <p>Internship Objectives:</p> <ul style="list-style-type: none"> <li>• Comprehensive review of privacy-preserving AI techniques (differential privacy, federated learning, data anonymization).</li> <li>• Implementation of differential privacy mechanisms in model training with adaptive privacy budgets.</li> <li>• Study and development of tools to detect memorization or unintended retention of sensitive data.</li> <li>• Benchmarking the trade-off between privacy and model accuracy for disease classification tasks.</li> </ul> <p>Expected Outcomes:</p> <ul style="list-style-type: none"> <li>• Working prototype integrating differential privacy for brain MRI tasks.</li> <li>• Empirical assessments of accuracy vs. privacy.</li> <li>• Best practices guidelines and documentation.</li> </ul>	
<i>Duration (month – max 12)</i>	6

<i>Duration (hours)</i>	150
<i>Open positions</i>	2

### Internship Skills

<i>Technical requirements:</i> • Experience with privacy engineering, cryptography basics and near duplicated retrieval system • Machine learning model training (PyTorch or TensorFlow).	
<i>Other skills</i>
